Project 1 - Web Form

P E R S O N A L   I N F O

FIRST NAME

LAST NAME

EMAIL

PHONE NUMBER

ADDRESS

ADDITIONAL ADDRESS

CITY

STATE

-- ⌄

ZIPCODE

Your task is to implement a web form similar to the one above.
Assuming the destination place is limited, the design should be split in two columns, as per above picture.

Your form should contain all fields shown on the picture plus a 'Submit' button.

Mandatory fields should be highlighted when not given.
User should be informed if any validation error occurs. Error message should appear in red, below the related field.

In case all validation rules are satisfied, user should get the following message:
"Thank you! Your details have been saved."

State field is a drop-down list consisting of the following options:
- CA (California))
- NV (Nevada)
- UT (Utah)
- AZ (Arizona)

The form should be validated as follows:
- 'first name', 'last name', email', 'state', 'zipcode', 'address' and 'city' fields are mandatory
- 'first name', 'last name' and 'city' should only contain letters
- 'email' address should have a valid e-mail format
- 'phone number' should be in the US format. It should consist of 10 digits plus, optionally, country code. Spaces, dashes and brackets are allowed, but not mandatory.

Examples of correct phone numbers:
- +1-555-555-5555
- +1-5555555555
- (555)-555-5555
- 555-555-5555
- 5555555555

Examples of incorrect phone numbers:
- 1-555-555-5555
- 555555555
- 555-5555-5555

- 'zip code' consists of five digits, eg. 02032, 99524
